A crime has taken place and the detective needs your help. The detective gave you the crime scene report, but somehow you lost it! You vaguely remember that the crime was a murder that occurred sometime on January 15, 2018, and that it took place in SQL City. Start by retrieving the corresponding crime scene report from the police department's database.

If you are having trouble figuring out what to do, look at the names of the variables in your data frames. Look at the head of the data frames. Most everything can be done with filter and str_detect.

This assignment was brazenly stolen from https://github.com/NUKnightLab/sql-mysteries.
